Pune

SUMMARY

Results-driven Full Stack Developer with 6.5+ years of experience designing and building enterprise-scale applications, modernization platforms, and AI-driven engineering solutions. Experienced in architecting intelligent workflows, AI-powered skills and agents, and developer productivity accelerators that streamline software delivery and enhance engineering efficiency. Strong background in application design, scalable system architecture, and emerging AI-driven development practices, with a proven ability to rapidly adapt to evolving technology trends and advancements.

TECHNICAL SKILLS

- **Programming Languages:** Java 17, TypeScript, JavaScript, Python
- **Frameworks:** Spring Framework 6.0, Angular 15, React 17
- **Web Design:** HTML 5, CSS, FlexBox, Tailwind
- **Libraries:** AG-Grid, Prime NG, NgRx, RxJs, Luxon, Resilience4j, Redux, PrimeReact, MUI, Zustand, TanStack Query, ShadCN
- **Testing Frameworks:** JUnit, Mockito
- **Database:** Oracle, My SQL, PostgreSQL, Redis
- **CI/CD:** Jenkins
- **Tools:** Oracle Data Integrator, JIRA, Confluence, Accurev, GitHub, Maven, Ansible, NVM, Browser Stack, Mend.io, GlowRoot
- **SDLC:** Agile Methodologies- Scrum, Kanban
- **Agentic AI:** Prompt Engineering, AI workflow design, AI agents and skills integrations, LLM Integration, Multi-Step AI Orchestration, RAG-Based Apps
- **AI Tools:** Github copilot, CLI and SDK, Claude , AWS Bedrock, Gemini, MCP Servers

PROFESSIONAL EXPERIENCE

Consultant (Development)

Aug '24 - Present

Deloitte USI

Pune, IN

- **Domain: Full Stack + Agentic AI Development | Tech Stack: Python, React, PostgreSQL, AutoGen, Copilot CLI & SDK, MCP Servers, Gemini, AWS Bedrock**
 - Led a team of developers in building an AI-driven modernization platform for transforming legacy COBOL applications into scalable modern architectures through multi-agent orchestration workflows.
 - Designed and implemented agentic AI workflows using agents, skills, hooks, MCP servers, Copilot CLI, and SDK-based integrations to automate enterprise **modernization processes that traditionally required months** of manual effort and deep COBOL expertise, significantly accelerating delivery timelines to days.
 - Engineered collaborative AI agent systems capable of generating detailed UI mappings, API specifications, business rule extraction, COBOL paragraph analysis, and modernization design artifacts to support end-to-end application transformation.
 - Architected intelligent documentation generation pipelines leveraging specialized AI agents such as dependency fetchers, code miners, assemblers, reviewers, and database persistence agents to analyze complex COBOL ecosystems and generate structured modernization artifacts with minimal manual intervention.
 - **Developed distributed multi-agent orchestration** pipelines for legacy code mining, modern application code generation, automated code reviews, test case creation, and SAST/DAST remediation workflows, enabling scalable and standardized modernization processes.
 - Developed a scalable full-stack AI platform using Python and React to generate modernization documentation through **multi-agent conversational workflows** powered by frameworks such as AutoGen.

Consultant (Development)

Sep '21 - Aug '24

Snap-On Business Solutions

Noida, IN)

Product-based company that offers a range of proprietary products to its auto and equipment manufacturers.

- **Domain: Development (Full Stack) | Tech Stack: Angular15, Java 17, Spring 6, SQL, Postgres, Jenkins**
 - Contributed to the migration of the project from Java 8 to Java 17, Spring 5 to 6, and Tomcat 9 to 10, executing a major technological upgrade. Also migrated the database from SQL to PostgreSQL, optimizing data management and improving scalability for future project requirements.
 - Implemented new features as defined and scoped by the product team.
 - Also conducted analysis of web security threats and handled CSRF issues.
 - Assisted in requirement analysis, high level design and complex code development for the application, wrote unit tests to verify functionality of the user interfaces, backend processing and database interactions and participated in weekly code reviews with lead developers.
 - Automated the process of transferring job files across AWS S3 bucket and remote servers using SFTP through an Ansible playbook.

- Migrated Jenkins jobs from one server to another from scratch.
 - Acquired in-depth knowledge of the product release process and have successfully managed and executed all releases since then.
- Automated the process of upgrading Tomcat and Java every quarter, through a Ansible Script run through Jenkins.
- Investigated and resolved bugs, performed angular upgrades, developed new features and ensured a seamless user experience.

Systems Engineer

Aug '19 - Aug '21

Infosys

Bangalore, IN

- **Domain: ETL (Big Data) | Tech Stack: Oracle Data Integrator, SQL**
- Fully automated the data migration design on Oracle Data Integrator with several cost reduction techniques.
- Possess ability to code complex queries against a large volume database.
- Experienced working in an Agile Scrum environment and gained good familiarity with the Agile Methodologies.

Systems Engineer Intern

Jan '19 - May '19

Infosys

Mysore, IN

- Developed a portal to generate mutual or general requests for inter-office transfer to different locations within India. Designed API's using Spring for matching the requests based on algorithms like round robin and initiating the transfer of employees.
- Acquired knowledge about various Front-End Technologies like Angular 11, HTML, CSS, Bootstrap and Backend Frameworks like Spring and Hibernate and cleared all the assessments with a good score.

Intern

Apr '18 - Jun '18

DRDO

New Delhi, IN

- Worked under Scientist-G at ISSA department to develop a desktop GIS application to view the weather trends of a particular region over which an aircraft will be flying.
- Implemented the project with the Dot Spatial library in DOTNET technologies and learnt how to extract the co-ordinates from shape files to get a 2D view of a region over a map.

EDUCATION

MS in Computer Science

Sep '22 - Nov '23

Liverpool John Moores University, England

Distance Learning Program - Upgrad

Research Driver Program on Computer Science Technologies

PG Diploma in Full Stack Development

Feb '21 - Mar '22

IIIT Bangalore

Distance Learning Program

- Secured CGPA: 3.45/ 4

B Tech in Computer Science

Aug '15 - May '19

DIT University

Dehradun, IN

- Secured CGPA: 8.25/10

ADDITIONAL INFORMATION

- **Languages:** Hindi (Native), English (Professional), German (Elementary)
- **Certifications:** AWS AI Certified Practitioner
- **Interests:** Reading, Marathon Running
